

oven liner

IMPORTANT USE & CARE INSTRUCTIONS

Please read these instructions carefully prior to using the oven liner. Improper placement or use of this oven liner may cause permanent damage to your oven.

CAUTION:

- Failure to use the oven liner as directed could damage your oven
- DO NOT use directly on oven element or open flame
- DO NOT use above 500°F (260°C)
- DO NOT use self-clean mode with oven liner in oven – remove Ovenliner first
- Clean the oven liner regularly – do not allow cooking fats or oils to build up
- DO NOT cover or block any holes inside the oven; covering holes could create unsafe carbon monoxide levels
- DO NOT use in conjunction with aluminum foil

PROPER PLACEMENT FOR ELECTRIC OVENS:

For electric ovens with a visible heating element on the floor of the oven: Place oven liner on the bottom of the oven under the element. Please note that the oven liner should be at least an inch below all parts of the element.

For electric ovens with no visible heating element on the floor of the oven: Place oven liner on the bottom wire rack of the oven - NOT on the floor of the oven.* You may place baking dishes and pans directly on the oven liner's surface.

PROPER PLACEMENT FOR GAS OVENS:

Place oven liner on the bottom wire rack – NOT on the floor of the oven.*

DO NOT cover or block any holes inside the oven. You may place baking dishes and pans directly on the oven liner's surface.

CARE & CLEANING

It is important to clean the oven liner regularly. Do not allow cooking fats or oils to build up on the surface of the oven liner. Oven liners are dishwasher safe or can be washed in warm, soapy water. Wipe dry with a soft cloth. To preserve the nonstick qualities, do not fold the oven liner or use abrasive cleaners or sharp implements (economy grades can be folded without damage). After use, some discoloration may occur but will not affect performance.

FOR BIRD OWNERS

The avian community has expressed concern regarding nonstick coated materials and their impact on birds. Published scientific tests have not revealed any danger; however, as a socially responsible company, we do not recommend our oven liners for those who keep pet birds in the house. Severe cooking fumes, odors and smoke in general as well as misuse of nonstick coated cooking products can potentially create health issues in pet birds.
